Some Odds and Ends About Computational Infrastructure

Rob Quick <rquick@iu.edu>
Associate Director Science Gateways Research Center
Manager High Throughput Computing

SCIENCE GATEWAYS
RESEARCH CENTER
PERVASIVE TECHNOLOGY INSTITUTE

Computing Infrastructures

- Local Laptop/Desktop – Short jobs with small data
- Local Cluster – Larger jobs and larger data but subject to availability
- HPC – Prime performance with parallelized code
- HTC – Sustained computing over a long period for serialized workflows
- Cloud – Need deeper permission on an OS and/or have deeper pockets

Some Examples of Academic CIs Worldwide

- HTC
  - EGI (formally European Grid Initiative)
  - OSG (Open Science Grid)
  - ASGI (Asia Pacific Grid Initiative)
  - NorduGrid
  - Earth System Grid (ESG)
  - Many other regional and national infrastructures

Some Examples of Academic CIs Worldwide

- HPC
  - XSEDE (eXtreme Science and Engineering Discovery Environment)
  - PRACE (Partnership for Advanced Computing in Europe)
  - Compute Canada
  - Greek Research and Technology Network (GRNET)
  - Centre for HPC (South Africa)
  - NCC (Brazil)

Some Examples of Academic CIs Worldwide

- Cloud
  - EGI Federated Cloud
  - NeCTaR – National eResearch Collaboration Tools and Resources
  - Jetstream (Part of XSEDE)
  - SwissACC (Swiss Academic Computing Cloud)
  - Many other national cloud infrastructures

What happens when you go home?

- DOSAR: Distributed Organization for Scientific and Academic Research
- If you want long-term OSG access, you can request membership in the DOSAR Project at https://osgconnect.net
- Choose “Sign Up” and read AUP
- Fill out form and use DOSAR as Project (Group)

Science Gateways Research Center

- https://sciencegateways.org/
- Abstract complex cyberinfrastructure from researchers
- Behind Web UI or Client
- Provide Consulting and Development Effort in Gateway Creation

Apache Airavata

- https://airavata.apache.org/
- Software framework that enables you to compose, manage, execute, and monitor large scale applications and workflows.
- Distributed computing resources such as local clusters, supercomputers, computational grids, and computing clouds.

Other Things to Consider

- Join ACM SIGHPC RCE
- Join and RDA IG/WG
- Just like DMP you should consider computational resources during the planning stages of your research
- If you develop code, use static analysis tools (https://continuousassurance.org/)
- Pass on to your colleagues and collaborators the things you've learned

Questions?

- Questions? Comments?
  - Feel free to ask me questions now or later:

    Rob Quick rquick@iu.edu

Exercises start here:
